PROFILE

DevOps / Platform Engineer with 10+ years building and operating production platforms on AWS & GCP, specializing in Kubernetes and GitOps. Delivered secure, automated CI/CD (GitHub Actions, CircleCI, self-hosted runners) with quality gates (Playwright, k6, policy-as-code) and reliable rollbacks. Deep Infrastructure as Code expertise (Terraform, Pulumi) across networking, IAM, and clusters, plus strong observability (Datadog, Prometheus/Grafana, OpenTelemetry) and on-call/SLI/SLO practices. Known for enabling teams via reusable templates, standardized Helm charts, and cost-aware delivery.

EMPLOYMENT HISTORY

Senior DevOps Engineer, Proxify

Stockholm

Nov 2025 — Present

- Built reusable GitHub Actions workflows and custom actions for Terraform, deployment, secret handling, semantic versioning, and release automation across GCP environments.
- Implemented least-privilege IAM patterns using Workload Identity, scoped service accounts, custom roles, temporary permission grants, and group-based access to reduce shared credentials and direct user bindings.
- Migrated GKE workloads to secure node pools with tighter OAuth scopes, enabled Calico NetworkPolicies, and rolled out Gateway API foundations across dev, staging, and production clusters.
- Designed and implemented PR-driven ephemeral environments with build, deploy, restart, and destroy workflows, enabling isolated validation for backend services and cross-service dependencies.
- Refactored Terraform modules and GitOps repositories to manage IAM, firewall rules, SSL policies, NetworkPolicies, Datadog monitors, Kubernetes resources, and shared platform configuration.
- Supported ISO27001/GDPR readiness by remediating Scrut/UpGuard findings, documenting network topology, environment separation, disaster recovery, legacy service account keys, and cloud access controls.
- Standardized observability with Datadog dashboards, SLOs, Terraform-managed monitors, severity-based alerting, Kubernetes pod restart alerts, load balancer monitoring, and production rollout checks.
- Led migration from GCE Ingress patterns toward Gateway API, HTTPRoute, and Kong-based routing, including KongPlugin support, custom health checks, CORS handling, metrics exposure, and route-level transformations.
- Improved release reliability by introducing PR title validation, YAML checks, immutable image/release documentation, release tagging, startup probes, PodDisruptionBudgets, and rollout monitoring across multiple services.
- Built platform documentation and enablement materials for GitOps secrets with SOPS/KMS, IaC workflows, temporary access grants, Cloud SQL Proxy usage, Datadog debugging, release management, and ephemeral environment adoption.

DevOps Lead, Demand.io

Los Angeles, California

Sept 2024 — Jan 2026

- Built reusable deployment templates that accelerated application onboarding with standardized dev, ephemeral, and prod environments (infra provisioning, monitoring, DNS).
- Migrated TypeScript, Python, and PHP microservices to continuous delivery on GKE with Argo CD GitOps, standardizing releases, rollbacks, and ephemeral environments.
- Designed end-to-end testing from scratch with Playwright for web/API workloads; maintained GitHub Actions pipelines and published artifacts with Allure reporting.
- Built secure GitHub Actions workflows and self-hosted runners inside private VPCs using Workload Identity Pools for keyless authentication and strong isolation.
- Standardized Helm charts and company-wide templates, including spec tests to ensure safe upgrades; managed CronJobs, Ingress, ConfigMaps, External Secrets, and Crossplane resources.
- Converted infrastructure to IaC with Pulumi (TypeScript) for GKE, networking and IAM; implemented validation and automated applies via GitHub Actions.
- Improved observability with OpenTelemetry and Elastic/GCP tooling; added synthetic checks and alerting policies based on metrics/logs to strengthen on-call.
- Built k6 performance suites with real-time reporting (InfluxDB) and scaling via self-hosted runners.
- Led cloud-edge migration of frontend apps from GKE to Cloudflare Pages, reducing infra overhead and improving caching performance.
- Implemented Zero Trust access (Cloudflare Access) and policy-as-code controls (OPA, Kyverno) for infrastructure and Kubernetes governance.

DevOps Engineer | Part Time, Proxify

Oct 2025 — Jan 2026

- Designed reusable GitHub Actions workflows for deployments, secrets, and Terraform/Terragrunt plan/apply across AWS and GCP, including scheduled drift detection.
- Migrated workloads from EKS to GKE and introduced Argo CD GitOps to standardize delivery, environments, and rollbacks.
- Implemented Workload Identity with least-privilege IAM (scoped service accounts, custom roles) to meet compliance requirements.
- Enabled rapid service onboarding via standardized templates integrated with reusable workflows and Datadog monitoring.
- Standardized networking with Kubernetes Gateway API and led enablement sessions to onboard engineering teams to the new platform.
- Built Terraform modules for metrics/alerting and led infra refactoring to support ISO27001/GDPR readiness.
- Refactored Helm charts and release tooling to enforce semantic versioning and automate changelogs via custom TypeScript GitHub Actions.
- Implemented PR-driven ephemeral environments with cross-service dependencies triggered through structured PR commands.

Automation Engineer, Kea

Mountain View,
California

Jan 2024 — Sept 2024

- Improved monitoring and incident response using Grafana (Faro/Loki/Tempo), OpenTelemetry and k6, identifying memory leaks and strengthening on-call practices.
- Implemented synthetics monitoring for critical user journeys and third-party dependencies, reducing time-to-detect for outages.
- Built Playwright E2E coverage and nightly test workflows; shipped dashboards on EKS (Helm) to track incidents and test versions.

- Enhanced service integration tests and maintained unit test coverage with Jest and Nock.
- Supported safe releases using Git flow; automated deployments with GitHub Actions and Terraform.
- Developed operational scripts for local/cloud environments (Cloudflare tunnels, AWS tooling) and standardized Node.js build pipelines with caching.

DevOps Engineer, Kiwify

São Paulo

May 2023 — Oct 2023

- Migrated workloads from GCE/App Engine/Cloud Functions to Cloud Run and GKE using Helm + Argo CD GitOps, reducing cloud spend by 20%+.
- Deployed Datadog monitoring on Kubernetes and implemented synthetics + alerting to improve performance visibility and incident response.
- Built reusable GitHub Actions for static apps, Cloudflare Workers/Pages, and Argo CD operations (restart/rollback), integrating security scanning and gated check-ins.
- Standardized Terraform modules and automated infrastructure deployments with GitHub Actions using a GCS backend.
- Built Go tooling to replicate versioned secrets/dependencies into ephemeral environments for faster debugging and safer releases.
- Supported multi-cloud migration planning (GKE/GCS to EKS/S3) with account/environment separation and AWS SSO integration.

DevOps Lead, Andela

New York, NY, USA

Jun 2022 — May 2023

- Promoted to internal DevOps Lead after initial client engagement; led platform delivery and team enablement.
- Rebuilt v1 ecosystem into v2 using Terraform, GKE, Argo CD, GitHub Actions and Jenkins, migrating VMs/App Engine/Cloud Functions to Kubernetes.
- Introduced standardized GitOps patterns for DNS and secrets management (ExternalDNS, External Secrets) and improved reliability through reusable Helm charts.
- Expanded observability with Datadog (APM/RUM), synthetic monitoring, and end-to-end tests; trained teams on deploy/rollback/runbooks.
- Built Jenkins shared libraries to standardize deployments, secrets, migrations, and infrastructure CRUD operations.
- Optimized cloud spend and prevented regressions by implementing billing alerts and governance, saving \$10K+ per month.
- Developed Kong plugins (Lua/Go) and Istio traffic policies to support secure migrations and service-to-service communication.

DevOps Engineer, Holonic

Silicon Valley, CA, USA

Oct 2021 — Jun 2022

- Built Kubernetes-based platform POCs on GCP for Andela's next-gen application, using Terraform and GitHub Actions for automated delivery.
- Owned GCP project/environment setup, IAM (custom roles), and least-privilege access management across teams.
- Led client demos and delivery reviews; operated ingress and service routing using Kong/NGINX and supported early Elastic Stack adoption.

DevOps Engineer, Webjump (Nestlé / Ambev)

São Paulo

Feb 2019 — Oct 2021

- Owned CI/CD pipelines, developer workflows, and monitoring strategy across multiple applications and environments.
- Built and integrated automated web/API/performance tests into pipelines, increasing overall test coverage.
- Implemented and operated ELK stack for centralized logging and incident troubleshooting.

- Developed IaC with CloudFormation, Terraform and Packer; automated configuration with Ansible.
- Scaled CI workloads using Azure Pipelines and AWS ECS/Fargate; managed Docker images and ECR workflows.
- Built Jenkins ecosystem with spot-worker strategy to improve throughput and reduce CI costs.
- Partnered in Agile delivery (Scrum/Kanban) and supported hiring through technical interviews.

Software Development Engineer in Test, Rockstar Coders

Chicago, IL, USA

Sept 2018 — Feb 2019

- Built scalable test automation in Ruby and Node.js across multiple client projects.
- Created web and API test suites for local and integration environments; integrated pipelines in CircleCI.
- Scaled parallel test execution using containerized workloads on AWS.
- Maintained automation frameworks with WebdriverIO/Cypress and supporting Bash tooling.

Software Development Engineer in Test, Webjump (Ambev / InBev)

São Paulo

Feb 2018 — Sept 2018

- Implemented test automation in Ruby for Magento (PHP) applications, covering frontend and backend workflows.
- Improved web/API/performance test coverage and integrated tests into CircleCI with parallel execution.
- Containerized test environments with Docker to improve repeatability and developer adoption.
- Supported Agile delivery and participated in technical interviews.

Software Development Engineer in Test, Vilas Boas IT

São Paulo

Jun 2016 — Jan 2018

- Led QA automation within squads, defining standards, conducting code reviews, and evolving the core test framework.
- Delivered KPI reporting and dashboards across API/Web/Mobile automation tracks.
- Built customer frameworks from scratch using Cucumber/Capybara/RSpec (web), rest-client (API), and Calabash (mobile).
- Containerized test execution with Docker and automated runs via Jenkins; managed AWS EC2 build agents and dependencies.

QA Lead, Anheuser-Busch InBev

Campinas

Oct 2016 — Apr 2017

- Led QA practices and automation strategy, selecting tools and establishing standards across squads.
- Built KPI reporting for API/Web/Mobile automation and improved consistency through code reviews and style guides.
- Implemented test frameworks with Cucumber/Capybara/RSpec (web), rest-client (API) and Calabash (mobile); managed Xamarin Test Cloud execution.
- Created performance testing with Gatling (Scala) to validate scalability and response-time targets.

Sr. Quality Assurance Analyst, Geru

São Paulo

Mar 2016 — Jul 2016

- Wrote test scenarios in Gherkin (BDD) and managed test plans/defects using GitHub Issues.
- Built frontend automation with Ruby/JRuby/JavaScript using Selenium WebDriver + Capybara/RSpec.
- Executed manual, regression, and smoke test cycles in Agile environments (Kanban/Scrum).

Quality Assurance Analyst, Dafiti

São Paulo

Jul 2015 — Feb 2016

- Authored BDD scenarios (Gherkin), contributed to requirement analysis, and recommended product improvements.
- Tracked defects in Jira and versioned tests/scripts with GitHub/Bitbucket.
- Executed manual/regression/smoke cycles and built automation with Ruby/JavaScript + Selenium WebDriver (Capybara/RSpec).
- Performed performance testing with JMeter and supported Agile delivery (Kanban/Scrum).

Quality Assurance Analyst (Freelance), Dafiti

São Paulo

Jun 2015 — Oct 2015

- Built iOS mobile automation with Ruby (Calabash, RSpec, Cucumber) using BDD scenarios in Gherkin.
- Improved release confidence by expanding regression coverage and collaborating with developers on defect triage.

COURSES

Ruby on Rails Bootcamp, Campus Code

ITIL V3 foundations, Impacta

SUMMARY

Core Competencies

- - Platform Engineering (AWS/GCP) Kubernetes (EKS/GKE) GitOps (Argo CD) Infrastructure as Code (Terraform, Pulumi)
 - CI/CD (GitHub Actions, CircleCI, Jenkins) Release governance Ephemeral environments Policy as Code (OPA, Kyverno)
 - Observability (Datadog, Prometheus/Grafana, OpenTelemetry) SLI/SLOs Incident response Cost optimization
